

The GNU Experiment

Author: Zissai Hill Omo

Dedicated to RMS (Richard Matthew Stallman), moot (Christopher Poole founder of www.4chan.org website) and especially to the 4chan technology board (4chan.org/g/) because without them this would have not been possible.

The GNU experiment

ABSTRACT

The exact reason for the existence of this book is not clearly obvious but the results I hope are worth the effort. Experimenting is easy. Even children experiment as a means of learning about the surrounding world. This is not easy. This is HELL. The experiment I'll conduct will not be easy.

Becoming something that I am not is not easy. Becoming a person who watches anime all day long and only uses GNU/Linux software will certainly be interesting. One month of pure decadence living in the world of a 4chan.org/g/ typical user will not be easy. But nothing is easy.

For science and for posteriority this has to be done. Therefore I, Zissai Hill Omo, will sacrifice a whole month of my precious limited time on this blue ball floating aimlessly in the vast Space, to get deep inside the world of 4chan's technology board later referred as /g/, to document and live the life of the poor souls that do it every day. Becoming one of them will require me great efforts. I could only hope for the best.

The message in which I announced this experiment contains the general idea of the GNU experiment. The following message I posted on /g/ 3 days before the starting date of the experiment:

"Dear /g/ents,

I'm doing an experiment this next coming month (and year) or maybe even more months (2-3 months).

This experiment will consist of me only using free software (GNU/Linux), and freedom-respecting websites (no youtube, google). I will still use a proprietary bios since I don't have the money to buy a leotee laptop only for this.

I will not use a cell phone since I already don't have one atm and I'm doing ok without one. I never liked phones too much.

I will watch a lot of technology related animu (battle programmer shirase, serial experiments lain, stuff like that) and at night time when parents sleep I will watch hentai and fap furiously.

I will keep some sort of journal of what software I'll be using, and what problems I will have to overcome. Maybe I will write a short book based on this experiment.

I don't really have a specific goal I want to reach with this, but it will be fun trying to be something I clearly am not (a fucking loser).

I want to see how you, the lowest of the low people live every day. For the experiment to be complete, a mighty neckbear will be grown in the process.

After I finish this with this shit I will get back on to my usual productive computer usage (shitty windows, visual studio programming, Hollywood movies, etc).I only hope that I won't get stuck like this forever, but I really think that it won't happen because I get bored easy with things I don't really like.

The experiment will last the whole month of January or maybe more if I feel that the outcomes are inconclusive.

The only time I will use proprietary software will be in the extreme case I need to do something that I can't do (or don't know how to) in GNU/Linux and it's really, really necessary for my upcoming college exams. I will try my best not to resort to this.

When I'll finish this experiment I will post the journal/conclusions book here on /g/, maybe it will be a funny/interesting thing to read to some people. Even if not it, will still be funny for me after some years.

Suggestions/constructive criticism is welcomed.

English is not my native language, sorry for the mistakes."

Experiment prerequisites and conditions:

One alive human test subject for the experiment (myself, the author Zissai Hill Omo);

One computer system running a freedom-respecting GNU/Linux distribution;

One older laptop computer running a freedom-respecting GNU/Linux distribution;

A high-speed internet connection;

Huge amounts of time, energy and stimulants (coffee+cigarettes);

The computer used in this experiment has two Kingston ssd drives for storage (sorry for the: s.s.d. drive- solid state drive drive), 8 GB of Kingston RAM, one AMD Athlon II X3 460 Processor functioning at standard frequency, and an Asus Nvidia GT 440 video card + standard input-output peripherals.

The laptop used is a 10 year old Toshiba A10 laptop that can barely boot, with a dead battery.

The GNU/Linux distribution used is not mentioned, because GNU/Linux systems are very flexible and customizable. It's worth mentioning that the distribution installed on the desktop computer is a one week old - fresh install, and the one on the laptop is around 1.5 years old.

The software installed on both of the experiment machines is 'normal' software for day to day use.

Day 0 - Zero-day attack

I just woke up from a night of heavy drinking. The date is 01.01.2014. It's day 0 of the GNU experiment. The hopes are high. Or maybe it is only an illusion. Nevertheless it's already too late to think about other things. This has to be done, one way or another. After a big fresh pot of GNU/moka coffee and one or two cigarettes I boot up the good old trusty HAL 9000 desktop machine and start the experiment.

I don't have clear goals for this day. Improvisation will be my guide! I fire up the Mozilla Firefox browser and search for some English words to check their spelling. Damn, damn, damn! My English is so rusty! I see that a thread I started last night on /g/ is still alive and kicking even after 12 hours! Some random Anon (Anonymous user) said: "Maria†Holic, totally /g/ related". Hm... I wonder what that one is about. Among few things others said: "Baldr Force EXE Resolution", "Bloody Monday is a fine manga, if you're into that too.", "there's also Eve no Jikan, more about AI."

I start Deluge – BitTorrent Client. I already have two anime series in the download queue. One more sip of coffee. While reading about the plot of those recommendation to see if they seem interesting to me, I stumble upon a picture with an anime-character girl who says: **"A thirty-two bit extension and a graphical shell for a sixteen-bit patch to an eight-bit operating system originally coded for a four-bit microprocessor, written by a two-bit company that can't stand 1 bit of competition."** . I sketch a sarcastic smile in my sickened GNU/mind and I think to myself that I am not alone in this quest. The picture is a clear reference to the EVIL "Windoze"botnet - operating systems. After some reading I settle on "Eve no Jikan" because it seems to have an interesting plot and it has received many awards. Even though there are enough seeders, downloading seems to start very slow. I take the last sip of black tar textured GNU/coffee and look at the time. It's 16:30 already! Time passes so fast while writing! After replacing my old tux penguin wallpaper with a big boobed, sexy anime girl drinking wine, I start getting deeper into the life of a neckbeard /g/entooman. I MUST start watching ANIME. I already have illegally downloaded Serial Experiments Lain so I'm going to watch that while the others finish downloading.

Right. It's 21:09 and after 5 hours of watching that 'crap' I feel very exhausted. I'm not sure if I feel like this because of the hangover or because of watching this anime. While watching this I spent some time on IRC on a random channel until they started talking about meat and food. I don't fancy meat and meat products so I quitted that room to focus my whole attention on the anime. I liked the first few episodes, but the ending sucked. Overall the experience wasn't bad at all, but the ending sucked ass from some points of view. Lain is not an anime girl, Lain symbolizes a whole lot more. Lain is in everybody and

everybody has Lain inside them. All I can say is that you should watch it too because it's not wasted time. The cyberpunk theme was strong in this one. Now it's time for some red wine left from the other night, cookies and aimless /g/ lurking.

It's already 22:15 and today I had not done any programming. Maybe tomorrow. That wine starts kicking in just a little. Best cure for a hangover? Having another drink! I'm not an alcoholic, but I remember reading somewhere that all great writers were alcoholics. Maybe that's why I drink these days - so I could actually get inspired or.. even more importantly – get motivated to overcome my laziness and actually write this thing. I should start a thread on /g/, or maybe not. I have to wait a few more hours now to start the 'ugly' part of this experiment. Day zero of fapping to hentai. A veritable zero-day attack on my own brain sanity. Great! Just fucking great! The thing I always thought to be the lowest of the low of humanity! But for science, there are no excuses, even if I have to sacrifice my sanity, personal well being and zone of comfort, this has to be done.

Day 00000001

15:37:25. The date is 02.01.2014. I woke up had a smoke and ate a glorious GNU/breakfast/lunch/whatever. Same shit different day. I already have fucked-up/procrastinating feelings that this is wrong, it's a waste of time and that I should stop it. But now that I started I can't stop. It would be even more unproductive. At least I don't have a hangover anymore. Time for brewing some coffee and browsing /g/.

16:22. Actually I don't feel like browsing that shithole right now. The coreutils-8.22 folder on my desktop has something mysterious about it. It's been waiting for a few days now, so I'd better try messing around with it ! 17:00. HOLY FUCKING SHIT! The ls command source file, ls.c is around 5000 lines of code! Take note that's only one command/cli program! And people call GNU/LINUX a solution to software bloat! I'm no expert C programmer but if I would waste one week and receive one dollar for every useless line of code I would be able to take out from that crap, I'd be pretty damn rich. Well not millionaire-rich, but still pretty rich. I never knew that open source/free software code can be such a mess! I almost feel sad for the developers who have to put up with this crap. Well fuck it, it's not my problem, it's Richard Stallman's problem. He let this thing become the abomination it is!

If anybody needs a custom-'hacked' version of uniq.c or yes.c let me know. OR actually fuck it. Do it yourself and enjoy the beauty of FOSS and GNU world. By doing it you could actually have a chance to meet Stallman who would thank you by giving you proper ButSex. After all, *Love Ain't Nothing ButSex Misspelled*. You don't have the software you need? No problemo hermano! Here at GNU that is not a problem! You will have lots and lots of fat bearded developers ready to make your dream software become a reality FOR FREE! Or if that's not an option, you could jump on the bandwagon and write it yourself. But as nothing truly is free, the actual cost of this is your sanity and anal virginity. Anyway free is free, as once a long time ago a wise, fat, bearded man suffering from paranoid schizophrenia/autism/assburger syndrome said.

Thus, “free software” is a matter of liberty, not price. To understand the concept, you should think of “free” as in “free speech,” not as in “free beer”.

Yeah right. Take that crap back with you in your cave. That shit doesn't apply to the capitalistic 2014 world economy. Here you either adapt or die. Free speech? Please make a visit to Russia and enjoy your PUSSY RIOT type of 'free speech'. And don't forget to take your lube with you mister Stallman. I heard that those Russian inmates would just love to free-up your old stinky asshole that reeks of GNU/freedoms. The more I look into it, the deeper I get the more I come to agreement with the genius that said that **“GNU/Linux is only free if your time is worthless”**. Sorry, but everything contains a grain of truth. And this quote is no exception. Enough GNU bashing for today. Time for some crappy Chinese cartoons that are very popular amongst /g/ users ! Today's choice is “Eve no

Jikan" ! Time of Eve or whatever that means. 20:29 and I finished those 6 episodes. The theme of this animation was pretty good. But the characters and the ending were horrible. I don't recommend it to anyone. Unless you want to waste your time. Now I'm gonna go watch some tv. YES, you read that right! Fucking good old shitty brain mush inducing television. Bulletproof Monk – some cheesy action comedy with Chinese kung-fu shit. 22:22, shitty movie. FUCK, must everything suck these days? Whatever time for some /g/.

00:08. The strange humming noise coming from the high-voltage cables and 9 hours spent in front of these screens start to give me a headache. Today /g/ is full of shitposters and NSA related threads. Never change /g/, never change. SÓLSTAFIR - Kukul and 0 smokes left. Maybe tomorrow I will quit. GNU code left me with a very bad impression. Since the code behind GNU is crap, all that is left is the philosophy. Which is also dying day by day. It's safe to say that the day RMS will go belly up, the FSF will be left without a captain and it will slowly sink. It's really a depressing thing that there's nobody that could bring fresh life into the GNU project and make it triumph. Maybe it's for the best this way. Things will sort out eventually.

01:47 and episode 4 of Bible Black. 30 minutes on /b/ and I will go to sleep.
02:48 Shutdown -h brain NOW! NOW NOW!

Day 1+1

16:11:00, date is 03.01.2014. Ate something and went to the corner store to buy ciggies. Fuck! It's hard quitting stuff when you're a GNU/Linux user. The GNU/Linux user unfriendliness can make some people go bonkers. Literally fucking crazy! I mean we are the 1%, we are the fucked up ones, aren't we? Excepting servers, of course. 90% of those are already running some flavour of GNU/LINUX so they're already fucked up. But that's the side effects of being a fat stupid lazy-ass sysadmin with no other skills. Enjoy your shitty jobs, faggots.

"The highest IQ by some margin was the Linux test group, averaging at 117. The Linux group showed highly elevated levels of several socio-cognitive disorders including several linked to pedophilia and violent outbursts, while the Apple group seemed to be the most socially adjusted." I'm no serial criminal but I've got my own issues, as everybody on this stupid earth has. So this internet joke has something true about it after all. Well, at least I'm not a gay mother fucker fucking applefag faggot. They may be more 'socially adjusted' but that's just an excuse for being a raging homo. **"The Apple group had a higher proportion of homosexuals, at 43%."** Those researchers at MIT can't be all wrong, can they? Whatever, yo, whatever. Time for some /g/ !!!!!!! OH BOY OH BOY!

17:52, after some random battlestation/daily programming/GNU vs. tux threads, I stumble upon a thread that sparks my interest. Cicada 3301. I remember this from last year. Some people say this is **"the most elaborate and mysterious puzzle of the internet age"**. Well, I don't really think that's true. **"Some have speculated that it is a recruitment tool for the NSA, CIA or MI6."** Yeah, sureeeeeeeee. Like NSA/CIA/MI6 have nothing better to do then print pictures of cicadas and put them on telegraph poles in Warsaw, Poland. The best bet is that this whole thing is a big hoax made by some bored nerds/hackers. 18:59, after some reading about this on <http://uncovering-cicada.wikia.com/> I'm starting to like this. It seems that this thing is just a very elaborate capture the flag – inspired type of intellectual game. Meh, pretty cool, what can I say. Maybe this year another round will be held. I might go on some IRC channels to help out if I can. Until then time for some cheap animu!

20:35, forget animu. I had to go and eat and stuff. The cicada 3301 stuff started to happen! Time to waste a few hours on that. www.youtube.com/watch?v=YA1fONCH-CY, this was a song from a previous challenge but it sounds pretty good so I might as well listen to it on repeat while I waste my time with the new challenge.

21:33 "<NiceLurk> those who know dont tell those who tell dont know " Yeah... so actually some motherfuckers actually know something about this. Meh, I missed the train now it's almost pointless. 22:05 4chan's /x/ board: "Seriously what is this shit?" and the reply: "A group of people who like to wank their intellectual dicks for the amusement of other puzzle wankers. So really nothing, move along." Hahahaha, somebody hasn't completely lost his mind

with this. I'm psychically tired. Time for a GNU/cigarette and /g/.

23:38. I just discovered a priceless gem, on the endless www! The **“GNU/Stallman” theorem / Richard M. Stalin theorem a.k.a RMS theorem**. This theorem states the following: **“It is more important for software to be free than to be usable”**. I couldn't agree more. 'Le Lenny (ಠ_ಠ) face epic meme lelele(ಠ_ಠ) (ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ)(ಠ_ಠ).'

00:00. If by any chance any of the readers want to become a GNU/Saint/Prophet in the church of GNU, I have found the way! Just follow these simple rules and you will become one! Note that the following rules are an excerpt from [http://uncyclopedia.wikia.com/wiki/St. IGNUcius](http://uncyclopedia.wikia.com/wiki/St._IGNUcius) .

The Way of the Prophet

Living a life of purity is within your grasp—just follow the prophet IGNUcius' example:

- **Use only free software** ~ Run Emacs. Emacs is *all you need*. It does everything: text editing, programming, compiling, debugging, electronic mail. You *don't need* anything else. You *do need* Emacs. Feel free to run it on the free operating system of your choice— GNU/Linux or BSD. It'll be worth every penny.
- **Grow a beard** ~ In addition to being masculine, it makes an excellent crumb catcher. You can forage there later for stored food to ward off the starvation that will inevitably follow from your lack of income from programming.
- **Grow large** ~ The prophet teaches us that keeping large body fat reserves can sustain you for weeks, even months, when Pepsi and Cheezy Poofs are scarce. Don't question. It works for bears.
- **Moderate hygiene** ~ Excessive showering, grooming, and toothbrushing is not only vain, it wastes valuable coding time.
- **Embrace celibacy** ~ Physical and emotional entanglements are diversions from the path of righteousness. Fortunately, by blessed design, adhering to the basic tenets above greatly reduces the chances of this.

Is the Gnome logo, inspired by the habit of Richard Stallman of eating toe jam/fungus while giving public speeches?? I better let that one unanswered, since people might think I hate toe fungus or that I am fucking racist against GNU/toe jam/fungus eaters. The only suggestion I have to the Gnome logo creators is that the next version should include some fungus growing from the foot.

00:46, time for Bible Black hentai crap - Episode 5 and 6. And after that, browse some /g/ and go to bed.

Day Li(thium)

15:15, date is 04.01.2014. Overslept like I usually do *sight*. In the last two days I only had one cup of coffee. Maybe that's why I don't feel like my usual self most of the time. Fuchsia! Day lithium because if you don't really know chemistry, Lithium's atomic number is 3. Btw, did you know there's only one Lithium joke in the world? Honestly. Would I Li to you guys?

100 free lines of code written in any language you chose - prize to anybody who guesses what name I will pick for tomorrow's chapter/day.

15:56 Nescafe kakapuccino + GNU/cigarette watching jackass bad grandpa DVD rip. Pretty good movie but full of cliches. What to do, what to do..

18:15 let's go shitpost on /g/...

19:10 listening to some shitty dnb radio. Malex – offcentre and reading random shit on the interwebs. 20:46, time to make a shitty troll about cicada 3301. Small crappy social experiment to see how many actually will take it serious.

22:46. After tinkering for around half an hour with tor, I finally managed to make it work, and made a new thread on /x/, /g/ and /b/. Some user on IRC named '<attrition>' got close but not close enough. But at least he took the bait :) **"this image tho <http://imgur.com/H1TbVgH>, is very odd "**. I got bored waiting so I closed the tor website displaying the message that they were actually trolled hard. Pretty funny to watch neckbeards on IRC trying to solve your puzzle even though it's something fake. MUHAHAHAHA I was a little evil today. Actually not evil, but pranksteristic.

"It's only after you lost everything that you're free to do anything Good luck. 3301" was included in the jpg, and if you use outguess (only works on *nix systems), you would find the next piece of the puzzle. That is – if you could find the original jpg picture anymore. Waste of time if you ask me. But a competition like this still has great potential for finding a certain kind of people. But hey! Successful troll is pretty successful! At least I managed to rustle some jimmies and got on the Uncovering cicada wiki website. Here's the link if somebody is curious. I hope it still works.

<http://uncovering->

cicada.wikia.com/wiki/Puzzles_we_found_in_2014_and_doesnt_look_legit

00:53 I don't feel in the mood to watch anime/hentai today. Carrie 2013 remake starring Chloë Grace Moretz and then bed time. Not much writing for today, but most days people are uninspired. Plus that I had to eat and shower and stuff like that.

"Anyone involved in illegal activities would be cut off from our fellowship immediately." OHH REALLY? Are you fucking serious nigger? After you make complex puzzles that only hackers and crackers are interested in, you say this crap? Well of course they most likely are involved in illegal activities, who the fuck did you expect to be smart enough to join your shitty 'fellowship', pope Fucking Francis? Fuck you CICADA 3301.

Day π + 0.85840734641

15:51 Woke up ate and had a smoke. Wasted around 40 minutes on #33012014 IRC and now I don't really know what I should do. Hmm. Anime..Steins;Gate will do for now. 17:28. This anime crap is starting to drive me insane. But I guess it's a hate/love relationship, or an aquired taste? I like how they call CERN SERN and IBM IBN! IBN yo, IBN! IBN 5100 ... If kids nowadays would actually know that an IBM 5100 was clocked at 1.9MHz and had a maximum of 64KB of RAM. Maaan, those were the days, those were the days. And after 39 years even the dirt-cheap cell phones that weigh around 100 grams are hundreds of times more powerful and faster.

19:13. After 8 episodes of that I feel like a true neckbeard. Even my neckbear started to get to a reasonable size. I might even train it to become an awesome neckbear ninja fighter! Or .. maybe not. Fuck! Watching that crap sure made me hungry and lowered my iq by at least 5 points. I should go grab a bite. And for those of you that don't know what a neckbear is, here's the definition from www.urbandictionary.com/define.php?term=Neckbear :

"Neckbears are naturally docile creatures that remain calm until provoked. Living solely off of cheese pizza and dynamite, the neckbear lies dormant throughout the day. As dusk approaches, the neckbear pairs with it's companion, wreaking havoc upon all that dare step in their way, mainly due to an undefined man-bulge that penetrates the rear of the victim." And below is an artist's depiction of what a neckbear could actually look like.

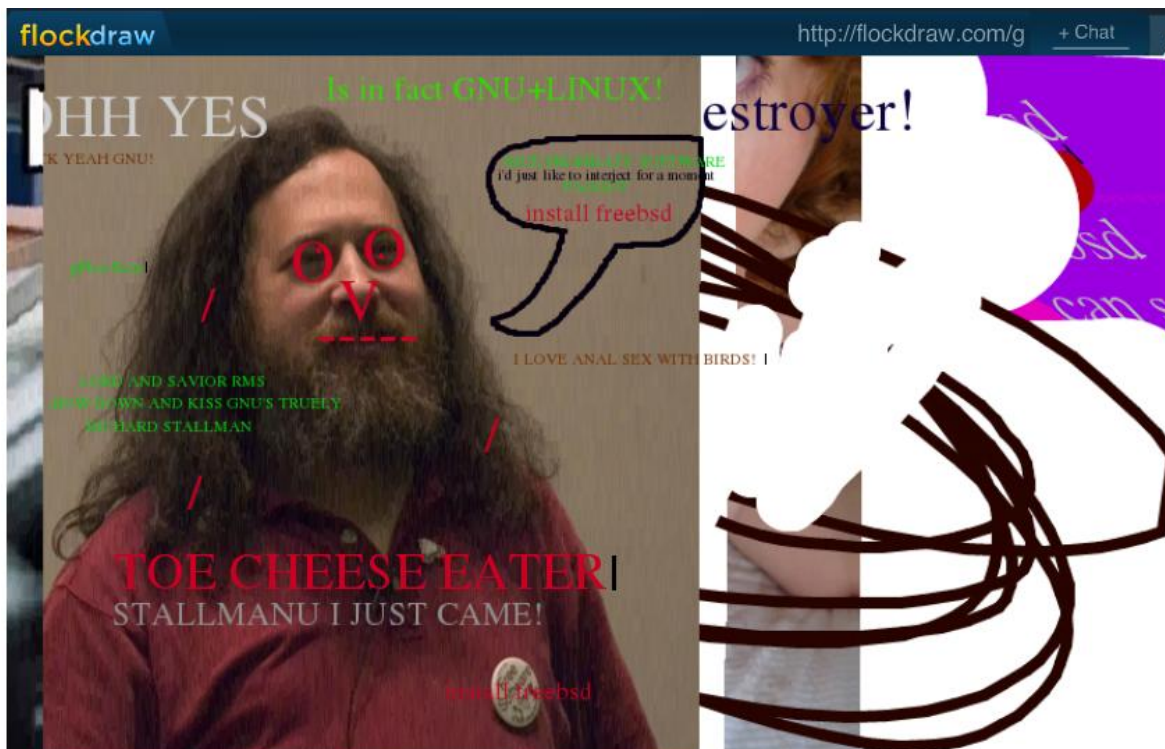

20:24, time for more animu and some /g/.. Finally 4chan threads aren't stuck anymore. Maybe moot did something wrong again. He's a faggot, that's what he is. 21:54 thread with great potential on /g/ destroyed by kids from /v and /b/.

"30 years ago, Richard Stallman began the development of glorious GNU. Today is a good day."
">lel neckbeard lel gene pool lel so superior lel subhuman xD"
"Why does Stallman now look so gross compared to Stallman then? If he

looked more like a thin older version of the OP pic, wouldn't free software have a slightly better edge?" "Freetards can't into personal hygiene." And now that's turning into a shit-thread by the minute. At least they could bash GNU source instead of repeating the same old shit about how Stallmanu doesn't wash. But no, this is /g/ and on /g/ the summer is eternal. Or should I call that, the cancer? Same thing different words. May St. IGNUcius liberate them all one day!

Another gem from today's anime! Steins;Gate episode 12. In the anime universe you can compress 3.24 terabytes to 36 bytes using a black hole and a LHC (large hadron collider). But still they ain't got shit on my skills! I have already a prototype program that can compress an infinite amount of data into only one bit of time-space. That is either a binary 0 or 1. How is that possible? Easy, but the problem lies in the decompression process. That's still something a lot of people struggle to create. Maybe one day, maybe one day I will succeed and make tons of dough! (muhahaha, 'le jewish face :^')! Even though it clearly rapes the laws of physics, if the decompression of one byte of data into an infinity number of bits would be achieved, then the laws of physics should be rewritten. Physicists, be ready I tell you, you will have lots work to do!

22:53 and I'm laughing. Some people on /g/ gathered on flockdraw and made this great piece of collaborative GNU/art dedicated to our Lord and

Savior GNU/STALLMANU!

It was way too funny not to be included here, so here it is and I hope you enjoy this as much as I did.

“I’d just like to interject for a moment. What you’re refering to as Linux, is in fact, GNU/Linux, or as I’ve recently taken to calling it, GNU plus Linux. Linux is not an operating system unto itself, but rather another free component of a fully functioning GNU system made useful by the GNU corelibs, shell utilities and vital system components comprising a full OS as defined by POSIX.

Many computer users run a modified version of the GNU system every day, without realizing it. Through a peculiar turn of events, the version of GNU which is widely used today is often called “Linux”, and many of its users are not aware that it is basically the GNU system, developed by the GNU Project.

There really is a Linux, and these people are using it, but it is just a part of the system they use. Linux is the kernel: the program in the system that allocates the machine’s resources to the other programs that you run. The kernel is an essential part of an operating system, but useless by itself; it can only function in the context of a complete operating system. Linux is normally used in combination with the GNU operating system: the whole system is basically GNU with Linux added, or GNU/Linux. All the so-called “Linux” distributions are really distributions of GNU/Linux.”

23:52 some more episodes of Steins;Gate and time for me to go and sleep.

Day 2²+1

15:55, date is 06.01.2014. I woke up had a GNU/cigarette, breakfast/GNU/lunch and after thinking for a while I had slayed the baby neckbear on my neck. It was already 3 weeks old so it was maturing fast and started to get violent toward strangers and family members. Please believe me that I had to make this decision to save human lives.

15:59, now I will go and have another GNU/cigarette and after that I'm going to eat some sweets and finish that anime I started yesterday. 17:38. Home alone for a minute so I fapped to 3D porn. Why did I not use hentai? Because I don't want to. Only 3 more episodes of this crappy anime. It's starting to get on my nerves already.

18:32, and it's fucking finally over. Damn that was long. Or at least that's how it seemed to be. Good drawing style, nice characters, a bit repetitive at the end, but overall it was good. I wouldn't watch it again though, I have other things to do with MY time. Anyway I recommend you to watch steins gate if you are interested in time travel and parallel universes. Now I'm going to go and play some acoustic guitar just to clear my head.

19:44 I want to smoke but I'd better wait to eat some delicious food and drink a beer. Until then let's start reading The UNIX- HATERS Handbook.pdf. This book is written in 1994. Cool. I like old books. 20:10. I'm at page 44 and I already like this book. **"Unix is a computer virus with a user interface."** And I say GNU/LINUX is even worse. **"GNU is a recursive acronym for "GNU's Not Unix!", chosen because GNU's design is Unix-like, but differs from Unix by being free software and containing no Unix code."** Basically this means that GNU is actually a cheaper-shittier UNIX clone that is even worse than the original because it's actually re-written from scratch by Stallman and his team of fat hobo code-monkeys. But hey, it's _FREE_, and every piece of obscure SHIT that's shoved down your throat is way BETTER if it's free, right? And the Linux kernel.. I let it's creator talk about that: **"The kernel had not become the "streamlined, hyper-efficient kernel I envisioned when I started writing Linux" and instead was now "bloated," "huge" and "scary" ... "** And that was said in 2009. Very sadly, now in the year 2014 it's even worse!

22:25 After two system *maintenance* reboots, GNU/dinner, I open a beer and start reading chapter four of the UNIX- HATERS Handbook. 00:00, I'm at page 150 and this book is great. One of the best I read. I'm going to definitely give it a second read after some time. The humor and writing style are amazing. I'm really glad I found this book. Now time for a little /g/. Some interesting stuff on IRC, a distributed system python script to calculate prime numbers that would maybe solve the _LEGIT_ Cicada 2014 puzzle. I'm gonna let it run for one more hour and read in the meanwhile. After that I will head out to bed and sleep(36000000). 36000000 = ~10 hours. Not very much done today. At least I wrote this fucking page and read ~150 pages from the Unix Haters Handbook.

Day 3!

17:23, date is 07.01.2014. Being a fan of The UNIX- HATERS Handbook, and bashing GNU/Linux so much yesterday I annoyed the retarded GODS of GNU and LINUX. They made my GNU/Linux install completely useless. By installing that distributed python script to calculate prime numbers I somehow managed to fuck up my whole system irreversibly and for good. I guess some of the dependencies got fucked up beyond my ability and patience to make them work again. Here's two funny error messages/warnings I got while trying to *fix* the install: **"Please stand by one minute while the display restarts"** One minute? I waited for almost 5 minutes and nothing fucking happened. FUCK YOU GNU/LINUX! FUCK YOU IN YOUR SOURCE CODE'S VAGINA WITH MY BINARY DICK! And the other one is even more retarded: **"Something wicked happened resolving ...(bla bla bla huge list of shitty packages and stuff)"** Wicked ? I DON'T GIVE A FUCK HOW YOU CALL IT, YOU PIECE OF INCOMPETENT SHIT PROGRAMMER! JUST GIVE ME THE FUCKING SPECIFIC ERROR SO I CAN FUCKING TRY TO FIX IT! God damn, I got angry! Well at least I didn't lose any work since I booted a livecd with backtrack 5 I had laying around and saved this book and some other stuff I worked on these last few days. Anyway this experiment was already starting to get on my nerves so I already had in plan to stop it.

18:10, time for some moar reading of that Unix hate book. I knew this piece of shit laptop would come in handy at some point of this experiment. Even if that's a 10 year old laptop I'm talking about it works fucking great, and it's sturdy as a tank. I guess the Japanese knew how to make quality stuff back in the day. Too bad nowadays they use cheap materials, mostly plastic. And the interesting thing about it is that the GNU/Linux install on it never got fucked up even though it's about two years old. I might had even unknowingly achieved satori/zen by not managing to fuck it up, but that's obviously not possible. It is crystal clear that an attempt to master the absurdities of any *nix system would exhaust anyone. Anyway, you should listen to what this guy said back in his day, because he was and still is right:

"And, indeed, that is my memory of Unix tools—you spend all your time learning to do complex and peculiar things that are, in the end, not really all that impressive. I decided I'd rather learn to get some real work done."

—Jim Giles

Los Alamos National Laboratory

20:58. I finished reading THE book. I feel enlightened! In this moment, I am euphoric. Not because I am using a GNU/LINUX system. But because, I am enlightened by my intelligence. (͡° ͜ʖ ͡°).

22:30. Since this is the final day of The GNU Experiment, I'm gonna finish it in style, by trolling freetards and GNU/Linux lovers on /g/ until I'll fall asleep.

The GNU Experiment Conclusions

Even if the GNU Experiment abruptly stopped after only 7 days, the results obtained are enough for the original purpose. It has been clearly established that:

1. **"*nix systems are computer viruses with a user interface."**
2. The GNU project is a big steaming pile o'shit, and it's father RMS is a BIG fat faggot.
3. Gnu/Linux is a joke and the GCC is garbage.
4. The GNU coreutils are bloated, and it MATTERS because GNU/Linux relies on them .
5. The C language is deprecated; The C language is a toy for grownups.
6. Linus Torvalds is a 44 year old spoiled brat that was born too late.
7. Linus Torvalds isn't a real programmer, real programmers don't make an entire os in C. Real programmers use ASM or high-level languages such as LISP and HASKELL. Never something as ugly as C!
8. GNU GPL is a communist cancer. Freetards are retarded retards.
9. **"GNU/Linux is only free if your time is worthless"**
10. Watching anime is retarded, and it lowers your iq by at least 5 points/day.
11. Hentai is even more retarded then anime.
12. People who watch anime/hentai are beyond the normal limits of stupidity.
13. GNU/Linux is bloated as FUCK. It's a fucking miracle it still sorta works.
14. GNU/Linux programmers are even worse than Indian programmers.
15. GNU/Linux is a piece of shit that must only be used as a last resort.

This story is a work of fiction. Names, characters, places and incidents either are products of the author's imagination or are used fictitiously. Any resemblance to actual events or locales or persons, living or dead, is entirely coincidental.

The stories and information included here are artistic works of fiction and falsehood. Only a fool would take anything posted here as fact. This was not meant to offend anybody in any way.
